European Energy – Strategic Pathway to BESS Excellence

11.11.2025

European Energy should target Poland and Germany to ensure long-term value creation in the BESS market.

Question of the Case

How should European Energy expand its presence in the BESS market in 2026–2028, creating long-term value while managing risk and capital limitations?

Issues

Strategic focus
How to prioritize potential markets with varying maturity, competition levels, regulatory complexity and alignment with existing capabilities?

Financial Viability
European Energy has a limited budget of €300M, requiring precise allocation to maximize long-term value.

Strategy

"Next STEP to Power up!"
Investing in Retrofit + Standalone BESS through merchant agreements in the subsidy-driven Polish market

"BESS to the roots!"
Developing standalone BESS through tolling agreements in mature German market

Impact

18,6 GW
Total generated capacity over 18 years

1,38 B
Revenue generated until 2043

146%
ROI over 15 years

About the Company

As a player with an extensive market & technology portfolio, European Energy has a strong foundation for next STEPs.

Mission

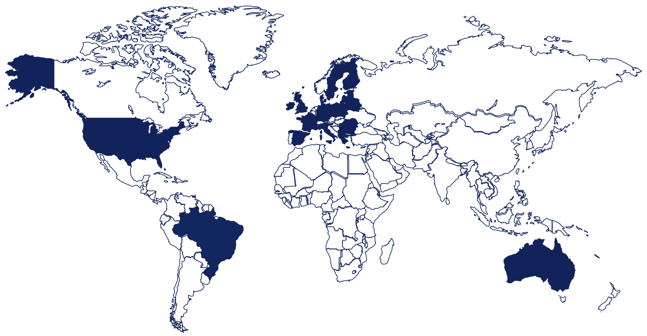
European Energy accelerates the **global green transition** by developing and operating **solar, wind** and increasingly investing in battery energy storage solutions.

Vision

Become a **leading global force** driving the **shift** toward a **sustainable, fossil-free future.**

Søborg, Denmark | >900 | 60+ GW managed

Market Position



European Energy operates in **24 markets** across 4 continents

European Energy technology portfolio

Solar PV | Onshore wind | Power-to-X | Offshore wind | Battery storage | Carbon capture

EE possesses **in-house development**, **engineering, procurement, construction** capabilities, as well as **asset management** and **financing expertise.**

Capital-light approach **by recycling funds** from project divestments and maintaining **selective ownership.**

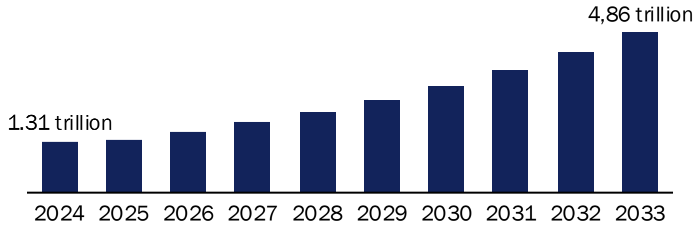
€380,4 million	**€144 million**	**~1.3 GW**	**4.5 GW**
Revenue in 2024	EBITDA in 2024	Operational capacity as IPP	Installed capacity (total)

Sources: Case | Annual Report 2024

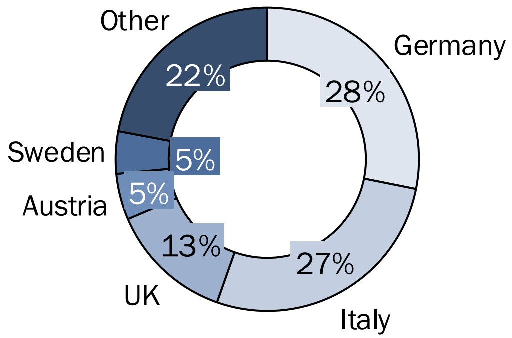
Analysis

Europe’s renewable energy and battery markets are booming, but upcoming storage challenges drive demand for BESS.

Renewable energy market grows at 14,9% CAGR (2025-2033)



Battery market concentration in Europe (2024)



Top 5 markets = 80% of 2024 installed capacity

Renewable energy overtook coal as the world’s biggest source of electricity for the first time in 2025

Global renewable capacity is set to double by 2030

+4600 GW = power generation of CN+EU+JP

High intermittency

Price volatility

Emerging challenges

Curtailment increasing

Grid congestion

21.9 GWh Batteries installed in Europe in 2024: 11th consecutive record-breaking year

15% Annual European batteries market growth

400 GWh Total European batteries capacity forecast by 2029

For 3 years, BESS market is the **fastest growing battery demand market globally.**

52% ↑ for BESS vs. 25% ↑ for EV battery

Sources:

Poland & Germany stand out as top BESS markets based on financial strength, accessibility, regulatory support, and existing expertise.

Countries	Weight	UK	PL	DE	DK	LT	AU	FI	CZ	RO	GR
Financial attractiveness	40%	7	10	10	7	5	10	2	2	5	2
Market accessibility (competition)	20%	3	5	2	7	8	4	6	8	7	7
Regulatory support	15%	8	10	8	7	9	7	6	6	5	6
Capabilities and market experience	25%	10	10	9	10	9	7	5	3	4	5
Evaluation	100%	7.1	9	7.85	7.75	7.2	7.6	4.15	4.05	5.15	4.35

Limitations

UK:
High competition and limited subsidy / support mechanisms reduce the relative attractiveness for new entrants.

DK:
Although Denmark provides solid baseline opportunities, it would prevent EE from realising greater upside in higher margin-markets.

LT:
Market size is small, and most flexibility capacity is publicly funded; few private merchant opportunities remain.

AU:
Outside the European market, introducing higher risk and complexity for European Energy.

Sources: Case

Implementation

To capture both markets, two strategies were defined: one for emerging, subsidy-driven growth & one for mature, low-risk value creation.

NextSTEP to Power Up

Strategy for the Polish market.

- ✓ Capturing the increasing energy needs of one of Europe's fastest-growing economies
- ✓ Leveraging subsidies to establish more BESS for far less capital
- ✓ Integrating strong industrial demand with large-scale renewable integration needs.

BESS to the roots

Strategy for the German market.

- ✓ Harnessing the established experience of European Energy's first market, Germany
- ✓ Exploiting the growing sustainable energy needs of Europe's largest economy
- ✓ Integrating Germany's maturity and stability to reduce volatility

Leverage Poland’s subsidies before 2027, incorporating a mix of retrofit & standalone assets targeting energy-intensive industries.

Macro economic factors

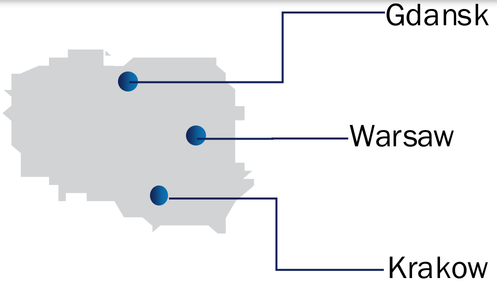
- Poland is the **fastest-growing economy** in the European Union, with real **GDP** expected to rise by **3.3% in 2025**.
- Under Liberal Prime Minister Donald Tusk, the government can further **leverage substantial subsidies**, covering up to **65% of costs** for BESS projects above 2 MW, amounting to as much as €1 billion – a move to strengthen sustainable development.
- However, the upcoming November 2027 elections introduce **political uncertainty**: a subsequent shift toward a more conservative prime minister could threaten both the country’s sustainable growth prospects and access to such subsidy programs.

→ **Polish BESS market needs to be captured before 11/2027** !

Poland emerges as a battery energy storage powerhouse in the EU

4.3 GWh large-scale BESS capacity planned in Poland by 2029

Where to operate in Poland



>> Locations based on **proximity to industrial hubs**, high energy consumption and renewable energy production plants

Business Model

- **Merchant agreements** ensure energy trading, focusing on ancillary markets with arbitrage opportunities based on the “Duck Curve”
- **Mix of retrofit (25%) and standalone (75%) BESS**, with priority on retrofit-expansion, leveraging 10% higher revenues, 12% less CAPEX costs and 33% shorter development time.
- EE should sell to **energy-intensive industries**, like steel or the chemical industry. Companies like Groupa Azoty S.A. (Chemicals) and Arcelor Mittal Poland (Steel)

Sources: The European Commission | IEO Poland | Case

To seize this opportunity, European Energy must act fast, secure grid access & capture high returns through a merchant model with full control.

Strategic decisions

A **Year 1 entry** in **Poland** lets European Energy quickly launch initial projects and secure **early grid access** in this emerging market.

By Year 2, it can scale to full potential, leveraging regulatory readiness and experience.

European Energy adopts a **merchant revenue model** tailored to the market, enabling participation in ancillary services and exploiting arbitrage opportunities.

This flexible approach **aligns with the dynamic nature** of Poland's evolving energy landscape.

European Energy should maintain **strong control** over the **entire value chain**, from **development** through **operation**, to secure control, maximize margins, retain strategic flexibility, and **create long-term value.**

Value creation: European Energy's merchant revenue model generates value for clients by reducing energy price volatility of renewable energy and enhancing revenue opportunities compared to traditional fixed contracts.

Must-Win Battles

Regulatory and Grid Access Mastery:
Secure exclusive grid connections and complete all necessary regulatory approvals, including subsidies
>> Goal: 3 key projects in Warsaw, Gdansk, and Krakow by the end of 2026

Market Revenue Optimisation:
Achieve 90% utilisation of merchant market participation opportunities, including ancillary services and energy arbitrage
>> Goal: At least 509 MW secured by the end of 2026

Leverage Germany's growing BESS market for stable, low-risk growth through tolling contracts with industrial & automotive clients.

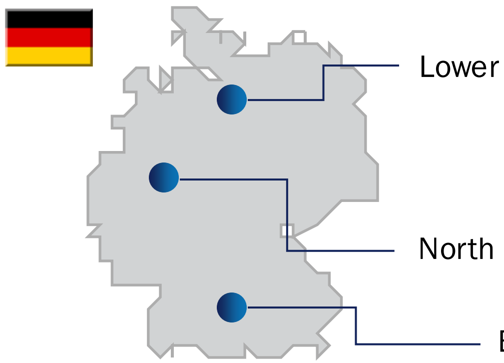
Strategic Factors

Strategic fit for EE's sustainability mission as it leads Europe's energy transition with ambitious targets to reach **80% renewable electricity by 2030.**

Extended **exemption** of large-scale batteries **from grid fees** until August 2029.

Germany dominates the European annual battery market. 6.2 GWh capacity in 2023-2024. **Expected growth potential** in Germany of **8,6 GWh in 2026.**

Top profitability opportunities with EE's already established market presence. **Highest revenue** potential at **lowest WACC.**



>> Location based on low saturation, scaling opportunities & proximity to industrial hubs.

Automotive industry

Car manufacturer such as Volkswagen and Mercedes-Benz aim for carbon-neutral production by 2030–2040. Their factories, suppliers, and charging networks require a stable flow of green electricity.

Other Manufacturers

To meet EU climate targets and rising energy costs, German manufacturers increasingly seek direct renewable power supply and energy storage solutions.

>> In Germany, EE can provide stable, fixed-price renewable energy and storage capacity to the targeted automotive & manufacturing sectors.

Sources: German Federal Ministry | Statista | Statista 2 | MercedesBenz | Volkswagen

Enter Germany in Year 2 to establish a tolling-based revenue model with value-chain control & secured industrial partnerships for long-term growth.

Strategic decisions

A **Year 2 market entry** allows European Energy to move beyond pilot scale and establish a stand-alone BESS platform in one of Europe's most mature, stable and advanced but still capacity-limited markets, critical for long-term success.

European Energy adopts a **tolling-based BESS model** in Germany to combine financial stability with strategic industrial partnerships. Fixed-fee agreements ensure predictable revenues, low-risk, 80% debt financing, and a low 5% WACC.

European Energy should retain strong ownership across the **value chain** from development to operation. This secures control, captures higher margins, maintains strategic flexibility, and builds long-term value.

Value creation for clients: the tolling model offers cost stability, guaranteed access to renewable energy, and measurable progress toward carbon-neutral production while making EE a reliable partner in their green transformation.

Must-Win Battles

Identify and secure strategy-fitting locations:
In high-demand, grid-constrained industrial regions, maximise tolling value and ensure fast grid access.
>> Goal: **3 optimal sites** secured by **Q2 2026**.

Secure clients:
In the German industry, via long-term tolling agreements to secure stable, contracted revenues and ensure future scalability.
>> Goal: Sign a minimum of **5 multi-year tolling agreements** by **2027**, covering a minimum of 70% of installed capacity.

Coordinate a phased rollout to optimise capital allocation, regulatory timing & operations by initially focusing on Poland, then Germany.

Preparation & Market Entry (Q1–Q2 2026)
- Finalise **regulatory approvals** and grid-connection rights in Poland and Germany.
- Secure **Supply Framework** contracts
- Form a cross-market **BESS task force**

Scale-Up & Cross-Border Expansion (2027)
- Add **233 MW standalone** capacity in Poland (total > 800 MW installed).
- Begin **108 MW standalone** construction in Germany under tolling PPAs

Pilot & Retrofit Deployment (Q3–Q4 2026)
- Construct and commission **200 MW retrofit** BESS in Poland
- Launch **366 MW standalone** pilot projects

Full Operation & Optimisation (2028 -)
- Commission **190 MW standalone** BESS in Germany (total ≈ 1.1 GW).
- Launch centralised monitoring
- Establish second-life strategy
- Explore further market entries

What needs to be done?

Regulatory & Market Setup
- Grid Connection Agreements
- Secure Participation Rights
- Legal Frameworks

Partnerships & Financing
- Structure Financing
- Engage TSOs for grid integration
- Sign Supply agreements

Organisation & Capability
- Knowledge Transfer
- DE/PL BESS taskforce
- O&M training program

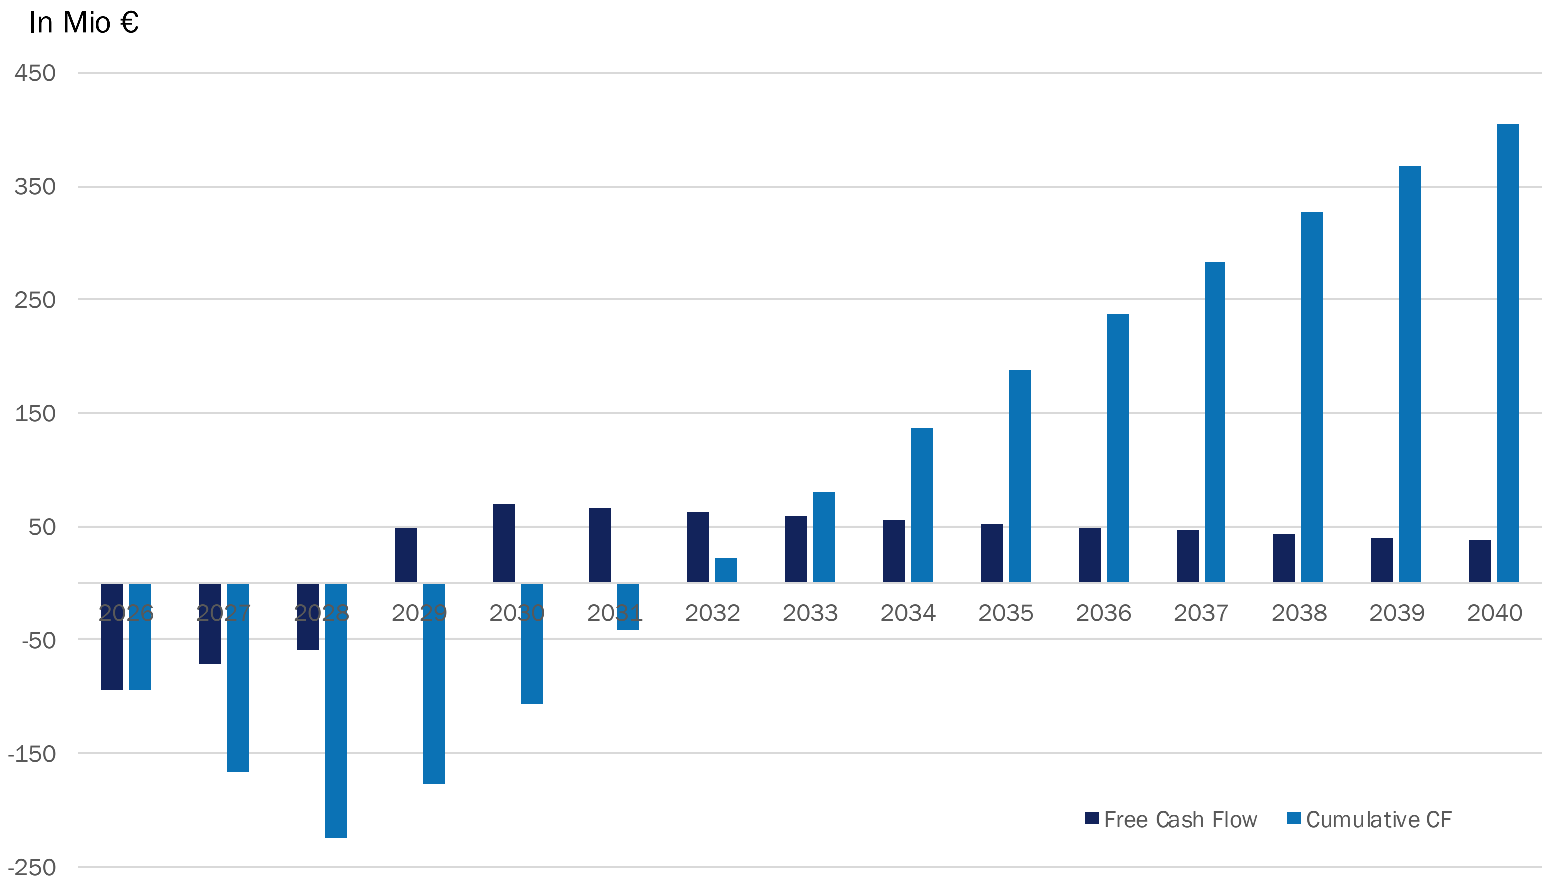
Additionally, It is crucial to mitigate key volatility and uncertainty risks through market, business model & timing of investment.

	Risk	Mitigation
1	Revenue Volatility (Merchant Risk)	• Utilisation of Tolling in German market to provide stable Cash Flows, hedging against volatility in Polish market
2	Regulatory & Market Uncertainty	• Diversified between the Polish and German market • Experience and Capability already established in both
3	Grid Connection & Permitting Delays	• Focus is first on retrofit sites • Secure grid capacity early. • Partner with experienced local DSOs.
4	CAPEX and OPEX Inflation	• Buffer of 5 million in CAPEX to provide margin of Safety • Utilisation of Polish subsidies: more capacity for less CAPEX
5	High competition (German market)	• Tolling enables a competitive pricing strategy: low margins, high volume

Conclusion

As a result, European Energy achieves €414 M cumulative cash flow and 146% ROI over 18 years through balanced market diversification.

Free Cash Flow Forecast



€414 M Cumulative Cash Flow Generated

IRR **17,30%**

6,27y Payback Period

Total Gen. Capacity **18,6 GW**

146% Total ROI over 18 years

A balanced market expansion strategy achieves strong financial returns while establishing a pathway for future growth.

Balanced Market Expansion

- Dual-market entry captures both *high-growth Poland* and *low-risk Germany*.
- Ensures diversification of revenue models (merchant + tolling).
- Builds European Energy's leadership position in the emerging BESS market.

Strong Financial Returns

- €414 M cumulative cash flow by 2043, with a 17.3 % IRR and 6.3 years payback period.
- 146 % ROI achieved through phased, capital-efficient rollout.
- CAPEX €300 M fully leveraged for > 1.1 GW capacity.

Pathway to Sustainable Growth

- Establishes European Energy as a leading flexible-energy provider in Central Europe.
- Lays foundation for integration with Power-to-X and grid services, as well as further BESS expansion
- Strengthens ESG positioning and resilience under the EU Taxonomy.
